The Last Invention: Artificial Intelligence vs. Human Intelligence

For the first time in history, our technology doesn't just help us think – it competes with us.

For thousands of years, every technology humanity built made us stronger. The wheel helped us move faster. Engines gave us power. Computers helped us calculate. But artificial intelligence is different.

For the first time in history, we are building machines that don't just extend human capability – they compete with it. AI can already write, design, analyze, code, diagnose disease, and make complex decisions. And its capabilities are improving at a pace that even its creators struggle to predict.

In this provocative keynote, Menny Barzilay explores the rise of artificial intelligence and why we may be approaching one of the most important turning points in human history. Because artificial intelligence may not just be another invention – it may be the last invention humanity ever needs to make.

BEST FOR

Any audience, from leadership offsites to all-hands meetings. No technical background needed.

KEY TAKEAWAYS

- Why AI represents a fundamentally different technological revolution
- Why leading scientists and technologists are deeply concerned about its trajectory
- How AI may reshape economies, work, security, and power
- What the rise of machine intelligence could mean for the future of humanity

AVAILABLE AS

TED-Style · Standard

TED-style or standard talk: 15–60 minutes

**ABOUT MENNY**

Menny Barzilay is an internationally recognized cybersecurity expert, entrepreneur, and strategic advisor. He is the CEO and co-founder of Atorian, a partner and co-founder at Cytactic, and the CTO of the Blavatnik Interdisciplinary Cyber Research Center at Tel Aviv University. Previously, he served as a CISO in the intelligence services of the Israeli Defense Forces.
